TITLE: Method of synthesizing lithium-aluminum hydride. Class 12, No. 186983

SOURCE: Izobreteniya, promyshlenyye obraztsy, tovarnyye znaki, no. 20, 1966, 30

TOPIC TAGS: lithium aluminum hydride, chemical synthesis

ABSTRACT: This Author Certificate introduces a method of synthesizing lithium-aluminum hydride by a reaction of sodium-aluminum hydride with lithium chloride in diethyl ether. To accelerate the process, it is carried out with additions of aluminum trialkyls. In a variant of the synthesizing process, aluminum-trialkyls are added in a quantity of 1-7%.

Vytresneniye odnikh ostatkov oksosoyedineniy drugimi v molekulakh proizvodnykh tiazoledindion-2,4-gidrazona-2)

PERIODICAL: Zhurnal Obshchey Khimii, 1958, Vol. 28, Nr 5, pp. 1205 - 1208 (USSR)

ABSTRACT: In earlier papers (References 1-3) the authors described for the first time the synthesis of 5-arylidene-mono derivatives and 5-arylidene-bis derivatives of thiazolidinedione-2,4-arylidenehydrazone-2. In this paper they tried to synthesize analogous derivatives of the thiazolidinedione-2,4-alkylidenehydrazone-2 which lead to the formation of some new rules in the synthesis of thiazolidine. It turned out that on heating the thiosemicarbazones of oxonium compounds of the aliphatic and hydroaromatic series with monochloroacetic acid in the presence

Synthesis of Thiazolidone Derivatives Which are of Biological Interest. VIII.  
Displacement of Radicals of Oxonium Compounds by Others in the Molecules of  
the Derivatives of the Thiazolidinedione-2,4-Hydrazone-2

of aromatic aldehydes, the expected 5-arylidene derivatives do not form, but that a displacement of the mentioned oxocompounds by arylidene radicals takes place (see mentioned scheme). Various 2"-arylidene derivatives of thiazolidinedione-2,4-hydrazone-2 (formula I) were obtained as result, which are mentioned in table I. As regards the thiosemicarbazones of oxocompounds of the aromatic series the displacement of the arylidene radicals by others took place only in the case of a heating of the mixture of the thiosemicarbazone of p-isopropylbenzoaldehyde and p-isopropylbenzoaldehyde with monochloroacetic acid, in which case the thiazolidinedione-2,4-p-nitrobenzylidenehydrazone-2 (table 1) resulted. Thus 2"-monoaryldes- or 2",5-diarylidene derivatives of thiazolidinedione-2,4-hydrazone-2 form in the condensation reaction of the thiosemicarbazones of the aliphatic and hydroaromatic series with monochloroacetic acid in the presence of aromatic aldehydes. The final results

Synthesis of Thiazolidon Derivatives Which Are of Biological Interest (Sintez proizvodnykh tiazolidona, predstavlyayushchikh biologicheskii interes) IX. The Synthesis of the 3-Hydrazone Derivatives of Thiazolidinedion-2,4 (IX. Sintez proizvodnykh gidrazona tiazolidinodiona-2,4)

PERIODICAL:

Zhurnal obshchey Khimii, 1958, Vol. 28, No 6, p. 1781-1782 (USSR)

ABSTRACT:

Earlier (Ref 1) the author described the synthesis of the p-acetoaminobenzylidene-hydrazone of thiazolidinedion-2,4 and of its 5-derivatives. The aim of this paper was the synthesis of the 3-derivatives for which the author had to commence from the 4-derivatives of R-tibon

and from monochloroacetic acid. The 4-tibon derivatives and their condensation products with this acid have hitherto not been described. Besides the introduction of aryl- and alkyl-derivatives often causes a physiologic activity. The 4-methyl-

IX. The Synthesis of the 2-Thiazolone Derivatives of Thiazolidinedion-2,1

thiosemicarbazone 3, 4-phenylthiosemicarbazide and 4-phenylthiosemicarbazone synthesized by the author according to the known method were condensed with p-acetaminobenzaldehyde and the corresponding thion derivatives were obtained (formula I,  $\text{Ar}=\text{H}$ ,  $\text{CONH}_2$ ,  $\text{H}$ ). These compounds react easily with monochloroacetic acid under the form of 1,2,4-triazolidine-3,4-dihydrazone-2-derivatives (II) (see scheme). The obtained 1-derivatives of thiazolidinedion-2,4-benzylidenehydrazone-3 are neutral products which are very difficult to solve in alkali liquors. In order to investigate the properties of the preparations at the transition from the thiazolidion ring to the thiazolidinone ring the author synthesized according to Pellizzari (Pellitstavi) (Ref 4) the 2-phenylthiosemicarbazone of benzaldehyde (III) and had it act on monochloroacetic acid (see scheme). For reasons of comparison the author synthesized and investigated the thiosemicarbazone of benzaldehyde, 4-phenylthiosemicarbazone of benzaldehyde, thiazolidinedion-2,4-benzylidenehydrazone-2, as well as 1-phenylthiazolidinedion-2,4-benzylidenehydrazone-3 (II,  $\text{R}=\text{Ar}=\text{C}_6\text{H}_5$ ). The latter compound has

Card 2/3

Synthesis of Thiazolidon Derivatives Which Are of Biologic Interest. SOV/79-28-6-14/55  
IX. The Synthesis of the 3-Hydrazone Derivatives of Thiazolidinedion-2,4

not been described hitherto. The ultraviolet absorption spectra of the 4-tibon derivatives differ little from the corresponding spectra of tibon. The formation of the thiazolidone- or of the thiazolinone ring does not exert any considerable influence on the ultraviolet absorption spectra so that the structure of the given cycles can probably be determined only by chemical and physico-chemical methods. There are 3 figures, 2 tables, and 6 references, 2 of which are Soviet.

AUTHOR: Vladzimirskaya, Ye. V.

TITLE: Synthesis of Thiazolidone Derivatives Which Are of Biological Interest. XIII. Transformation of Rhodanines Into the Thiazolidinediones-2,4

PERIODICAL: Zhurnal obshchey khimii, 1959, Vol 29, Nr 8, pp 2795 - 2798 (USSR)

ABSTRACT: As it may be seen from references 1-6, including the papers by N. M. Turkevich and co-workers (Refs 4-6), the transformation of rhodanines into thiazolidinediones-2,4 encounters several difficulties. Among the different methods, which are all not quite satisfactory, there is a method (Ref 7) which consists in transformation of 2-thiohydantoins into hydantoins (Ref 7) and which is based on prolonged boiling of the preparations with monochloroacetic acid. W. I. Croxall and his co-workers used this method (Ref 8) in the transformation of rhodanine and its 5-isopropylidene-, 5-sec.-butylidene-, 5-cyclohexylidene derivatives into the corresponding thiazolidinediones-2,4, with yields ranging from 38 to 77%. The experi-

Card 1/3

Biological Interest. XIII. Transformation of Rhodanines Into the Thiazoli-  
dinediones-2,4

ments carried out by the authors showed that this method can be used for rhodanines only which are more or less soluble in water (as, e.g. the non-substituted rhodanine, 3-phenylrhodanine). The reaction of monochloroacetic acid with the rhodanines follows scheme 1, which follows:

Much better results were achieved when the rhodanine derivatives were heated with dimethylsulphate without solvents, according to the method developed by Z. P. Sytnik and his collaborators (Ref 9) (Scheme 2). The authors showed that the transformation of the rhodanines into thiazolidinediones with

Biological Interest. XIII. Transformation of Rhodanines Into the Thiazoli-  
dinediones-2,4

dimethylsulphate is of a general character and can therefore be used for rhodanines substituted in the positions 3 or 5. If rhodanines are used which are not substituted in position 3, a simultaneous methylation takes place at this position. Some of the thiazolinediones-2,4, i.e. the 3-ethoxyphenyl derivatives, exhibit a marked tuberculostatic activity. There are 11 references, 4 of which are Soviet.

Title : Criticism and Bibliography. "Certain problems in the operation and planning of automatic machine production lines", by A. P. Vladzievskiy (Mashgiz 1953)

Periodical : Avt. Trakt. Prom. Ed. 1, 32-33, January 1954

Abstract : A review of A. P. Vladzievskiy's book concerning problems encountered in the operation and planning of automatic machine production lines. In spite of its shortcomings, the critic feels that the book can be used as a guide by technical personnel, and by students specializing in the automatization of industrial equipment and machine construction processes.

ABSTRACT: General layout and the transportation serving automatic lines are  
considered, as well as problems of designing and standardizing tool setups,  
equipment for chip removal, and clearing emulsion of chips and mud. The  
following automatic-line interlocks are described: part- or accessory-position  
interlock, tool break, normal lubricating-system operation, load on the cutting  
tools. Requirements for the standard machines intended for insertion into an

SOV/1448

Vladziyevskiy, Aleksandr Pavlovich, Professor, Doctor of Technical Sciences

Avtomaticheskiye linii v mashinostroyeni, kn. 2 (Automatic Lines in Machine Building, Vol 2) Moscow, Mashgiz, 1958. 339 p. 12,000 copies printed.

Reviewer: Boguslavskiy, B.L., Professor; Ed.: Dymshits, Ye.S., Engineer; Ed. of Publishing House: Rzhavinskiy, V.V., Engineer; Tech. Ed.: El'king, V.D.; Managing Ed. for Literature on Metal Working and Tool Making: Beyzel'man, R.D., Engineer.

PURPOSE: This book is intended for machine-tool designers, technicians, and scientific workers in machine building.

COVERAGE: This book is the third part of the author's general work "Automatic Lines in Machine Building." It describes standard automatic lines which are being exploited in the machine-building industry. The book is profusely illustrated with many figures. The practices of typical Soviet plants are frequently cited. There are 73 references, of which 71 are Soviet (including translations) and 2 English.

13. Line for machining truck fly wheels	79
14. Line for machining valves	80
15. Line for machining the levers of the automobile suspension	97
16. Line for machining typewriter segments	103
17. Line for final machining of the opening for piston pins	104
Ch. 12. Automative Line for Machining Parts of Shaft Types	
1. Line for machining shaft rotors of electrical motors	111
2. Line for machining railroad-car axles	116
3. Line for machining engine camshafts	119
4. Line for grinding crankshaft journals	124
5. Shop for automatic machining of crankshafts	125
6. Line for machining crankshaft lubrication openings	127
7. Line for machining push rods for exhaust valves	132
8. Another line for machining push rods for exhaust valves	134
9. Line for grinding barrel-shaped rollers	136
Ch. 13. Automatic Lines for the Mechanical Processing of Parts of Disc Types	
1. Inochkin's line for lathe and assembly work	140

Card 3/6

Automatic Lines (Cont.)

SOV/1448

2. Line for machining sealing frames	141
3. Lines with a group conveyor for machining ballbearing rings	143
4. Line for shaving block gear wheels	146
5. Line for machining spur one-collar gear wheels	147
6. Line for the mass production of small spur gear wheels	159

Ch. 14. Automatic Lines for Stamping and Welding Work

1. Line for production of bolts	165
2. Line for production of nuts	173
3. Line for production of hooked chains	179
4. Production of welded chains	182
5. Line for production of large springs	193
6. Line for production of rake prongs	195
7. Line for production of bicycle spokes	198
8. Line for production of truss reinforcements	199
9. Line for welding and mechanical work in automobile wheel production	203
10. Line for stamping railroad wheels	205
11. Line for the machining of latch knitting needles	209
12. Line for chemical and physical processing	210

Card 4/6

Automatic Lines (Cont.)

Ch. 15. Complete Automatic Production	
1. Automatic plant for pistons	212
2. Automatized shop for piston machining	223
3. Automatic production of ballbearings	225
4. Automatic shop for machining piston rings	235
5. Automatic shop for production of chisel-shaped plowshares	242
6. Line for production of moldboards	250
7. Automatic production of bucket-type parts	253
8. Automatic shop for machining of valve guide-bushings	261
Ch. 16. Automatic Lines for Assembly and Finishing Work	
1. Line for assembly of simplified supporting ballbearings	266
2. Line for assembly of shock-absorbing spring blocks	267
3. Line for assembly of conical roller bearings	268
4. Line for assembly of ballbearings	283
5. Line for finishing chemical and physical processing	297
Ch. 17. Automatic Lines of Metallurgical Enterprises	
1. Finishing line of the 800 rail and structural steel mill	305
2. Line for production of welded pipes with a spiral seam	309
3. Line for grinding bar metals	312

TITLE: Programmed Control of Metal Cutting Machines (Programmnoye upravleniye metallorazhishchimi stankami),  
All-Union Conference (Vsesoyuznoye soveshchaniye)

PERIODICAL: Vestnik Akademii Nauk SSSR, 1958, Nr 2, pp 113-115 (USSR)

ABSTRACT: This conference took place in Moscow from November 13-16, 1957. It was called by the Institute for Engineering of the AN USSR, the Experimental Scientific Research Institute for Metal Processing Machines, as well as by the Institute for Machines and Tools in Moscow. The conference aimed at the following exchange of experience and decision as to the most important work to be carried out in this field in future. The conference was attended by representatives of the Councils of Political Economy, of industry, engineering departments, scientific research institutes as well as of universities. A. A. Blagonravov, director of the Institute for Engineering opened the conference. The following reports were given:

1) V.I. Dikushin reported on the present stage of the system of preset course in the USSR and its development.

2) A. P. Vladizyevskiy reported on the tasks in the field of

Card 1/3

Programmed Control of Metal Cutting Machines  
All-Union Conference

50-2-44/49

- machine building in connection with preset course.
- 3) V. A. Trapeznikov reported on current work carried out by the Institute for Automation and Remote Control of the AN USSR.
  - 4) M. G. Breydo and A. Ye. Kobrinskiy (Institute for Machinery) reported on work carried out with a modernized model of a milling machine. They also mentioned that M. L. Bykhovskiy and A. Ye. Kobrinskiy had put equations describing the step by step principle of preset course.
  - 5) V. G. Zusman reported on the work carried out by the Institute for Metal Processing Machines.
  - 6) A. M. Lebedev reported on semiconductor switches.
  - 7) G. I. Kamenetskiy described hydraulic amplifiers and drives.
  - 8) D. R. Kritskiy spoke on peculiarities of constructions.
  - 9) A. V. Zinchenko reported on experimental results with a model of a milling machine.
  - 10) I. P. Konstantinov spoke on the work of the Factory for Milling Machines, Dmitrovsk.
  - 11) L. A. Gleyser reported on the control of a turning lathe by means of a perforated paper band.
  - 12) L. M. Kaufman reported on turning lathes controlled by counters.

Card 2/3

**Programmed Control of Metal Cutting Machines**  
**All Union Conference**

30-2-44/49

- 13) A. M. Razygrayev reported on the work of the Machine Factory imeni Ya. M. Sverdlov in Leningrad
  - 14) I. I. Knyazhitskiy reported on the work in the Machine Factory imeni S. M. Kirov in Odessa
  - 15) A. I. Levin reported on the work in the Tool Factory in Moscow
  - 16) G. A. Spynu reported on the use of tape recording.
  - 17) I. M. Eterman reported on a calculation method of the program of a milling machine.
  - 18) M. P. Rashkovich reported on the application of control of drills
  - 19) Ya. M. Khaymovich reported on electro-hydraulic machine drives.
  - 20) V. S. Vikhman reported on an automatic compensation of the wear of cutting tool
  - 21) B. V. Anisimov reported on the work carried out by the Chair for Computing Machines of the Technical College imeni Bauman in Moscow.
  - 22) I. A. Vul'fson reported on the development of automation of program setting abroad.
- This conference accepted a number of scientific organizational proposals.

- 1. Machine tools-USSR
- 2. Machine tools-Automation-USSR
- 3. Mathematical computers-Applications

SOV-117-58-8-1/28

AUTHOR: Vladziyevskiy, A.P., Doctor of Technical Sciences, Professor

TITLE: Domestic Automatic Machinebuilding Lines and Their Efficiency  
(Otechestvennyye avtomaticheskiye linii mashinostroyeniya i ikh effektivnost')

PERIODICAL: Mashinostroitel', 1958, Nr 8, pp 1-9 (USSR)

ABSTRACT: The use of hoppers between different machine tools and lathes is the simplest form of an automatic line. In the USSR two types of hoppers are employed: transit hoppers and storing hoppers (Figure 5). The transit hoppers operate continuously and feed the half-finished products at various places to other machines. The storing hoppers have only one feed opening and are especially useful in the case of a breakdown in the line. A combination of several machine tools is used in modern automatic lines. Among them is the automatic line ENIMS for the machining of cylinder blocks used in the Yaroslavskiy avtozavod (Yaroslavl' Motorcar Plant). The line consists of 351 spindles, and has an installed power of 112 kw. It replaces 95 workers (Figure 6). A more complex line has been designed by ENIMS and produced by the plant "Stankokonstruktsiya" for

Card 1/3

SOV-117-58-8-1/28

Domestic Automatic Machinebuilding Lines and Their Efficiency

the Minskiy traktornyy zavod (Minsk Tractor Plant) (Figure 7). It is used for machining cylinder blocks. The line consists of 265 machine tools and has an installed power of 258 kw. It replaces 224 workers. The automatic line 1L46 designed by the special designing bureau SKB-1 and produced by the Stankozavod imeni Ordzhonikidze (Machine Tool Plant imeni Ordzhonikidze) is used for machining the two-cylinder block of the tractor VTZ. The line is 30 m long and 8.9 m broad. It occupies a space of 350 m<sup>2</sup>. Its weight is 180 tons. Productivity is 30 blocks per hour. More complex lines are used for combined metallurgical, punching, thermal, mechanical, electrochemical, and packing work. One of them is the automatic line ENIMS for the machining of rollers and runners from the rough metal to the finished product (Figure 9). The productivity per shift is 343 rollers. The rollers have lengths from 275 - 400 mm. Another line is named "Automatic Piston Plant". It produces motorcar pistons from the raw aluminum to the finished product. Two of these lines have been produced by the plant "Stankokonstruktsiya" for the Ul'yanovskiy zavod malolitrazhnykh dvigateley (Ul'yanovsk Plant of Small Capacity

Card 2/3

SOV-117-58-8-1/28

Domestic Automatic Machinebuilding Lines and Their Efficiency

Motors). The production of the two lines is 2.4 million pistons per year. The installed power of the line is 853 kw; the space occupied 960 m<sup>2</sup>. The production cycle is shown in Figure 11. The article is to be continued. There are 7 photos 9 diagrams, and 2 tables.

TITLE: Soviet Automatic Lines in Machinebuilding Industry and Their Efficiency (Otechestvennyye avtomaticheskiye linii mashinostroyeniya i ikh effektivnost')

PERIODICAL: Mashinostroitel', 1958, Nr 9, pp 1-13 (USSR)

ABSTRACT: The article contains general information on the development of automatic lines in the Soviet Union with illustrated descriptions of the following automatic production lines: for ball and roller bearings at the "IGPZ Plant" (Fig. 12,13): for production of chisel-shaped ploughshares at the "Altay-sel'mash" Plant; for the working of one-rim gears for "1K62" lathes at the "Krasnyy Proletariy" Plant ; for watch-housing rings at the 2 Watchbuilding Plant; for the production of bolts and nuts (Fig. 15). The development of automatic lines for two-rim and bevel gear production is being planned. An immediate problem is the development of automatic lines for universal equipment, i.e. for antifriction bearings (Fig. 20) and for grinding bearing races (Fig. 21). Automatic lines for machining rope pulleys for road machines were developed

at the Chelyabinsk Plant imeni Volyushchenko (Fig. 22). Information includes a series of suggestions as to the organizational and technical measures to raise efficiency in this field.

There are 3 drawings, 4 tables, 5 flow charts and 3 photos.

TITLE: The Principal Ways and Prospects of Automation<sup>14</sup> in Mechanical  
Engineering in the Period of 1959-1965

PERIODICAL: Vestn. tekhn. inform. Eksperim. n-i. in-t metallorezh. stankov,  
1958, Nos. 11-12, pp. 1-32 ✓

TEXT: The author investigates problems of automation of single machine tools, the development of rapid-adjustment automatic lines and large-scale automation in large-series and mass production. The designs of semi-automatic machine tools should be revised with the aim to adapt them for automatic charging. In proportion to the propagation of flow methods of machining and the extension of the scope of automated technological operations, it will be possible to proceed from the automation of individual technological operations to the automation of the production flow as a whole. Automatic transfer lines have been developed, where not only the main technological operations are automated but

also the transfer of the machined article between the machining sections, the re-setting and re-fastening, check of dimensions, chip removal etc. The main problem of comprehensive automation consists in ensuring within the shortest time possible the most widespread use of automatic processes and in achieving the greatest efficiency for the national economy. In this respect, the substantiated selection of automation items and the demands towards their design are of particular importance. The author investigates the degree of efficiency of comprehensive and experimental automatic lines and also of multi-purpose standard-unit machine tools.<sup>14</sup> The most objective and complete indicator of technical and economic efficiency of the operation of automatic lines are production costs. There are 5 tables. ✓

Avtomatizatsiya tekhnologicheskikh protsessov v mashinostroyenii (Automation of Manufacturing Processes in the Machine-Building Industry) Moscow, 1958. 21 p. (Series: Peredovoy opyt proizvodstva. Ser. "Kompleksnaya avtomatizatsiya i mekhanizatsiya protsessov proizvodstva v mashinostroyenii," vyp. 2) 3,000 copies printed.

Sponsoring Agencies: Moscow. Dom nauchno-tekhnicheskoy propagandy im. F.E. Dzerzhinskogo, and Obshchestvo po rasprostraneniyu politicheskikh i nauchnykh znaniy RSFSR.

Tech. Ed.: R. A. Sukhareva; Ed.: Ye. A. Pankina.

PURPOSE: This booklet is intended for the general reader.

COVERAGE: The author presents a survey of the progress made in the automation of machine tools, and the organization of semi-automatic and fully automatic production lines. No personalities are mentioned. There are no references.
